WAYPOINT

PROJECT BRIEF

Community Resource Directory

A responsive website that helps local residents find community support services more easily.

PROGRAMME Ishvexa Hub Web Development Internship

ASSIGNMENT Week 1: Plan the experience

PROJECT TYPE Fictional demo website using HTML, CSS and JavaScript

PREPARED BY Epifania Luisa Cazembe **DATE** November 2026

PROJECT OVERVIEW

The Community Resource Directory is a responsive website that presents an organised collection of community support resources. It will help residents discover relevant services through keyword search and category filters. The project will be developed over six weeks, prioritising a clear, accessible and useful experience.

INTENDED USER AND USER NEED

INTENDED USER	USER NEED
A local resident seeking support or information, such as a young person, parent, job seeker or newcomer.	A simple way to find relevant services without searching many unrelated websites or contacting several organisations.

PRIMARY ACTION AND INTERACTIVE FEATURE

Users will search and filter resources by keyword and category, combine search and filters, view matching resource cards, clear filters, and receive a helpful message when no results match. The feature will use JavaScript and fictional sample data, with keyboard-accessible controls.

WEBSITE PAGES

1. **Home** — introduces the directory and guides visitors to resources.
2. **Resources** — provides search, category filters and resource cards.
3. **About / Contact** — explains the project, fictional-data disclaimer and feedback/contact information.

PROJECT SCOPE

The project will include three connected responsive pages, semantic HTML, accessible navigation, a data-driven resource section (local JSON or a JavaScript data array), and basic testing and documentation. It will not include a backend, database, user accounts, real personal-data collection, paid services or production APIs.

CONTENT AND DATA

All organisation names, services, contact details, descriptions, images and resource information will be fictional examples for learning and demonstration. The website will identify itself as a demo; no real personal information, credentials or confidential material will be used or published.
